

Curriculum Errata Notice

2025 Level I CFA Program

UPDATED 29 AUGUST 2024

This document outlines the errors submitted to CFA Institute that have been corrected.

Due to the nature of our publishing process, we may not be able to correct errors submitted after 1 September 2024 in time for the publication of the following year's print materials. However, we update all errors in the Learning Ecosystem (LES) and in this document at the end of each month.

We recommend checking either the LES or this document regularly for the most current information. Depending on when you purchase the print materials, they may or may not have the errors corrected.

All errors can be submitted via <http://cfa.is/Errata>

Quantitative Methods

Rates and Returns

Lesson	Location	PDF Pg	Revised	Correction
Rates Of Return	Holding Period Return	9	26 August 2024	<p>Replace: For example, an analyst may need to compute a one-year holding period return from three annual returns. In that case, the one-year holding period return is computed by compounding the three annual returns...</p> <p>With: For example, an analyst may need to compute a three-year holding period return from three annual returns. In that case, the three-year holding period return is computed by compounding the three annual returns...</p>
Money-Weighted and Time-Weighted Return	Example 8, Question 4	23	26 August 2024	<p>Replace the sum in the second calculation: 1.1471</p> <p>With: 1.1476</p>
Annualized Return	Equations	29	26 August 2024	<p>Replace: Equation numbers</p> <p>With: Starting on page 29, the equation numbers do not match up with the equation numbers referenced in the text. For example, on page 29, the equation is labeled as equation “7” but the text below it refers to it as “Equation 8.” Each subsequent reference to an equation in the text should be one number less than written for the rest of the learning module. For example, “Equation 9” should be “Equation 8” and “Equation 10” should be “Equation 9.”</p>
Other Major Returns and Their Applications	Gross and Net Return	33	26 August 2024	<p>The first paragraph under Gross and Net Return should read:</p> <p>A gross return is the return on assets managed less any trading expenses and commissions. Gross return is intended to reflect the investment skill of the manager. Expenses including management fees, custody fees, and taxes are not included in the gross return because they may be different for different investors. For example, most asset managers provide lower management fee rates to larger accounts. Excluding these expenses in gross returns provides a basis for evaluation and comparison of investment management skill.</p>

Lesson	Location	PDF Pg	Revised	Correction
Other Major Returns and Their Applications	Equation 14	34	26 August 2024	Replace: Fix the equation by removing the denominator: (1+inflation premium) $(1 + \text{real return}) = \frac{(1 + \text{real risk-free rate})(1 + \text{risk premium})}{1 + \text{inflation premium}}$
				With: $(1 + \text{real return}) = (1 + \text{real risk-free rate})(1 + \text{risk premium})$

The Time Value of Money in Finance

Lesson	Location	PDF Pg	Revised	Correction
Time Value of Money in Fixed Income and Equity	Example 2, Question 1	51	26 August 2024	Replace: $PV = \text{EUR}100$ $= \frac{2}{1.20} + \frac{2}{1.02^2} + \frac{2}{1.02^3} + \frac{2}{1.02^4} + \frac{2}{1.02^5} + \frac{2}{1.02^6} + \frac{2}{1.02^7}$
				With: $PV = \text{EUR}100$ $= \frac{2}{1.20} + \frac{2}{1.02^2} + \frac{2}{1.02^3} + \frac{2}{1.02^4} + \frac{2}{1.02^5} + \frac{2}{1.02^6} + \frac{102}{1.02^7}$
Time Value of Money in Fixed Income and Equity	Example 2, Question 2 and Solution 2	51	26 August 2024	Replace: Next, let's assume that exactly one year later, a sharp rise ...
				With: Next, let's assume that, exactly two years later, a sharp rise ...
Time Value of Money in Fixed Income and Equity	Exhibit 6	58	26 August 2024	Within the exhibit, the bar representing the fifth year is incorrectly labeled. The exponent 4 should be 3, so replace this expression on top of the bar: $D(1+g_s)^4 (1+g_i)^2$
				With: $D(1+g_s)^3 (1+g_i)^2$

Lesson	Location	PDF Pg	Revised	Correction
Time Value of Money in Fixed Income and Equity	Example 7, Question 2	59	26 August 2024	Replace: We may solve for D4 as GBP1.894 ($=1.787 \times 1.02 = D3(1 + gI)$) and the second expression to be GBP9.22 as follows: $\text{GBP9.22} = \frac{1.894(0.15 - 0.02)}{(1.15)^3}$
				With: We may solve for D4 as GBP1.823 ($=1.787 \times 1.02 = D3(1 + gI)$) and the second expression to be GBP9.22 as follows: $\text{GBP9.22} = \frac{1.823}{(0.15 - 0.02)} \cdot \frac{1}{(1.15)^3}$
Cash Flow Additivity	Example 14 – Solution to 1	76	26 August 2024	Replace: Foreign Strategy: Convert GBP1,000 at 1.2602 to receive USD1,260.20, which invested at the one-year US-dollar risk-free rate of 2.667 percent returns USD1,294.27 ($=1,260.20 e(0.02667)$) in one year.
				With: Foreign Strategy: Convert GBP1,000 at 1.2602 to receive USD1,260.20, which invested at the one-year US-dollar risk-free rate of 2.667 percent returns USD1,294.26 ($=1,260.20 e(0.02667)$) in one year.
Solutions	Solution to 5	85	26 August 2024	Replace: 2.29 percent = $(92.25/89)^{(1/3)} - 1$.
				Replace: 2.29 percent = (95.25/89)(1/3) - 1 .

Statistical Measures of Asset Returns

Lesson	Location	PDF Pg	Revised	Correction
Measures of Central Tendency and Location	Paragraph following Exhibit 2	91	26 August 2024	Replace: The modal interval always has the highest bar in the histogram; in this case, the modal interval is 0.0 to 0.9 percent, and this interval has 493 observations out of a total of 1,258 observations.
				With: The modal interval always has the highest bar in the histogram; in this case, the modal interval is 0.0 to 1.0 percent, and this interval has 555 observations out of a total of 1,258 observations.

Portfolio Mathematics

Lesson	Location	PDF Pg	Revised	Correction
Measures of Dispersion	Question Set – Question 2	109	26 August 2024	Replace: 2. The fund with the mean absolute deviation (MAD) is Fund: Replace: 2. The fund with the highest mean absolute deviation (MAD) is Fund:
Measures of Shape of a Distribution	Interpreting Skewness and Kurtosis – Question 2	115	26 August 2024	Replace: 2. Does the distribution displays kurtosis? Explain. Replace: 2. Does the distribution display kurtosis? Explain.
Portfolio Expected Return and Variance of Return	Equation 2	155	26 August 2024	Replace: $\sigma^2(R_p) = E\{[R_p - E(R_p)]^2\}$. With: $\sigma^2(R_p) = E\{[R_p - E(R_p)]^2\}$.
Portfolio Expected Return and Variance of Return	Equation 4	155	26 August 2024	Replace: $\text{Cov}(R_i, R_j) = \sum_{t=1}^n (R_{i,t} - \bar{R}_i)(R_{j,t} - E\bar{R}_j) / (n - 1)$ With: $\text{Cov}(R_i, R_j) = \sum_{t=1}^n (R_{i,t} - \bar{R}_i)(R_{j,t} - E\bar{R}_j) / (n - 1)$
Portfolio Expected Return and Variance of Return	Calculation under Equation 5	156	26 August 2024	Replace: $= w_1^2 \sigma^2(R_1) + w_1 w_2 \text{Cov}(R_1, R_2) + w_1 w_3 \text{Cov}(R_1, R_3) + w_1 w_2 \text{Cov}(R_1, R_2) + w_2^2 \sigma^2(R_2) + w_2 w_3 \text{Cov}(R_2, R_3) + w_1 w_3 \text{Cov}(R_1, R_3) + w_2 w_3 \text{Cov}(R_2, R_3) + w_2^2 \sigma^2(R_3)$ With: $= w_1^2 \sigma^2(R_1) + w_1 w_2 \text{Cov}(R_1, R_2) + w_1 w_3 \text{Cov}(R_1, R_3) + w_1 w_2 \text{Cov}(R_1, R_2) + w_2^2 \sigma^2(R_2) + w_2 w_3 \text{Cov}(R_2, R_3) + w_1 w_3 \text{Cov}(R_1, R_3) + w_2 w_3 \text{Cov}(R_2, R_3) + w_2^2 \sigma^2(R_3)$

Hypothesis Testing

Lesson	Location	PDF Pg	Revised	Correction
Tests of Return and Risk in Finance	Exhibit 6	226	26 August 2024	<p>Replace the text in “Step 4: State the decision rule.”: We reject the null hypothesis if the calculated χ^2 statistic is less than 13.09051.</p> <hr/> <p>Replace the text in “Step 6: Make a decision.”: Fail to reject the null hypothesis because the calculated χ^2 statistic is greater than the critical value. There is insufficient evidence to indicate that the variance is less than 16% (or, equivalently, that the standard deviation is less than 4%).</p>
				<p>With: We reject the null hypothesis if the calculated χ^2 statistic is greater than 13.09051.</p> <hr/> <p>With: “Reject the null hypothesis because the calculated χ^2 statistic is greater than the critical value. There is sufficient evidence to indicate that the variance is less than 16% (or, equivalently, that the standard deviation is less than 4%).”</p>
Tests of Return and Risk in Finance	Example 3 – Solution 4	234	26 August 2024	<p>Replace: Because 5.06 is not less than 3.325, we do not reject the null hypothesis; the calculated test statistic falls to the right of the critical value, where the critical value separates the left-side rejection region from the region where we fail to reject.</p>
				<p>With: Because 5.06 is greater than 3.325, we reject the null hypothesis; the calculated test statistic falls to the right of the critical value, where the critical value separates the left-side region from the region where we reject the null.</p>

Parametric and Non-Parametric Tests of Independence

Lesson	Location	PDF Pg	Revised	Correction
Tests Concerning Correlation	Question Set, Practice Problem 2	255	26 August 2024	<p>Replace: $r_s = 1 - 6(91(4840.5))$ $= -0.20416$.</p>
				<p>With: $r_s = 1 - 6(91(4840.5))$ $= -\mathbf{0.20417}$.</p>

Lesson	Location	PDF Pg	Revised	Correction
Tests Concerning Correlation	Question Set, Practice Problem 3	255	26 August 2024	<p>Replace:</p> $t = \frac{r\sqrt{n-2}}{\sqrt{1-r^2}} \text{ is } t = \frac{-0.2416\sqrt{7}}{\sqrt{1-0.041681}} = \frac{-0.540156}{0.978937} = -0.55177.$ <p>With:</p> $t = \frac{r\sqrt{n-2}}{\sqrt{1-r^2}} \text{ is } t = \frac{-0.20417\sqrt{7}}{\sqrt{1-0.041681}} = \frac{-0.540183}{0.978937} = -0.55181.$
Tests of Independence Using Contingency Table Data	Exhibit 9 – Step 4	258	26 August 2024	<p>Replace:</p> <p>We reject the null hypothesis if the calculated χ^2 statistic is greater than 9.4877.</p> <p>With:</p> <p>We reject the null hypothesis if the calculated χ^2 statistic is greater than 9.4877.</p>

Simple Linear Regression

Lesson	Location	PDF Pg	Revised	Correction
Estimation of the Simple Linear Regression Model	Exhibit 5 image	272	26 August 2024	<p>Replace:</p> <p>Company C residual (error term) given in Exhibit 5 as $e_3 = Y_3 - (b_0 + b_1X_3)$</p> <p>Company E residual given as $e_5 = Y_5 - (b_0 + b_1X_5)$</p> <p>With:</p> <p>Company C residual (error term) given in Exhibit 5 as $e_3 = Y_3 - (b_0 + b_1X_3)$</p> <p>Company E residual given as $e_5 = Y_5 - (b_0 + b_1X_5)$</p>

Lesson	Location	PDF Pg	Revised	Correction
Hypothesis Tests in the Simple Linear Regression Model	Equation 20	290	26 August 2024	Replace: $t_{intercept} = \frac{\hat{b}_0 - B_0}{s\hat{b}_0} = \frac{\hat{b}_0 - B_0}{\sqrt{\frac{1}{n} + \frac{\bar{X}^2}{\sum_{i=1}^n (X_i - \bar{X})^2}}}$ With: $t_{intercept} = \frac{\hat{b}_0 - B_0}{s\hat{b}_0} = \frac{\hat{b}_0 - B_0}{\sqrt{\frac{1}{n} + \frac{\bar{X}^2}{\sum_{i=1}^n (X_i - \bar{X})^2}}}$
Hypothesis Tests in the Simple Linear Regression Model	Exhibit 24	290	26 August 2024	Replace equation in Step 5: $t_{intercept} = \frac{4.875 - 3.0}{\sqrt{\frac{1}{6} + \frac{6.1^2}{122.64}}} = \frac{1.875}{0.68562} = 2.73475$ With: $t_{intercept} = \frac{4.875 - 3.0}{3.4596 \times \sqrt{\frac{1}{6} + \frac{6.1^2}{122.64}}} = \frac{1.875}{3.4596 \times 0.68562} = 0.7905.$
Hypothesis Tests in the Simple Linear Regression Model	Exhibit 24	290	26 August 2024	Replace text in Step 6: Reject the null hypothesis. There is sufficient evidence to indicate that the intercept is greater than 3%. With: Do not reject the null hypothesis. There is not sufficient evidence to indicate that the intercept is greater than 3%.
Hypothesis Tests in the Simple Linear Regression Model	Test of Hypotheses: Level of Significance and p-Values	293	26 August 2024	Replace second sentence in third paragraph under the section: The p-value corresponding to this test statistic is 0.016, which means there is just a 0.16 percent chance of rejecting the null hypotheses when it is true. With: The p-value corresponding to this test statistic is 0.016, which means that, assuming the null hypothesis is true, there is a 1.6% chance of observing a test statistic as extreme as the one observed, or more extreme.

Economics

Monetary Policy

Lesson	Location	PDF Pg	Revised	Correction
Interaction of Monetary and Fiscal Policy	Practice Problem 7	137-138	26 August 2024	<p>Replace answer options:</p> <p>accurately determine the neutral rate of interest.</p> <p>A. regulate the willingness of financial institutions to lend.</p> <p>B. control amounts that economic agents deposit into banks.</p>

With:

- A. accurately determine the neutral rate of interest.
- B. regulate the willingness of financial institutions to lend.
- C. control amounts that economic agents deposit into banks.

Introduction to Geopolitics

Lesson	Location	PDF Pg	Revised	Correction
Geopolitical Risk and the Investment Process	Exhibit 14: Risk Velocity	183	26 August 2024	<p>Replace:</p> <p>Pipeline Disruption Takes Several Quarters to Fix, Impacting the Energy Sector of Impacting Countries</p> <p>Low Velocity/Short-Term Impacts</p>

With:

Pipeline Disruption Takes Several Quarters to Fix, Impacting the Energy Sector of **Impacted** Countries

Low Velocity/**Long**-Term Impacts

Exhibit 14: Risk Velocity

High Velocity Short-Term Impacts

Low Velocity Short-Term Impacts

Low Velocity Long-Term Impacts

An Unexpected Protest Event May Increase Investor Concern right Away, and Then Resolve

Pipeline Disruption Takes Several Quarters to Fix, Impacting the Energy Sector of Impacting Countries

Patter Migration Unfolds Over Years Impacting Countries' Political Processes and Economic Growth

Exhibit 14: Risk Velocity

High Velocity Short-Term Impacts

Low Velocity Short-Term Impacts

Low Velocity Long-Term Impacts

An Unexpected Protest Event May Increase Investor Concern right Away, and Then Resolve

Pipeline Disruption Takes Several Quarters to Fix, Impacting the Energy Sector of **Impacted** Countries

Patter Migration Unfolds Over Years Impacting Countries' Political Processes and Economic Growth

Corporate Issuers

Working Capital and Liquidity

Lesson	Location	PDF Pg	Revised	Correction
Cash Conversion Cycle	Question Set, Solution 3	109	26 August 2024	<p>Replace: B is correct. The issuer that uses the vendor financing by delaying payments is increasing its days payable outstanding and thus lengthening its cash conversion cycle. The issuer is reducing its need for liquidity by taking advantage of the vendor financing at the cost of the forgone discount.</p> <p>With: A is correct. The issuer that uses the vendor financing by delaying payments is increasing its days payable outstanding and thus shortening its cash conversion cycle. The issuer is reducing its need for liquidity by taking advantage of the vendor financing at the cost of the forgone discount.</p>

Capital Structure

Lesson	Location	PDF Pg	Revised	Correction
Optimal Capital Structure	Paragraph following Exhibit 7	204	26 August 2024	<p>Replace: However, as debt increases, the possible financial distress costs rise substantially and equal the tax benefit of debt at D^*. Beyond this point, greater leverage reduces firm value, the present value of financial distress costs outweigh the tax benefit.</p> <p>With: However, as debt increases, the present value of expected financial distress costs begins to rise and offset the tax benefit of debt, with the optimal amount of debt D^* at the point at which the marginal benefit of the tax shield equals the marginal cost of expected financial distress. Beyond this point, greater leverage reduces firm value, as the increased present value of expected financial distress costs outweighs the marginal tax benefit.</p>

Financial Statement Analysis

Analyzing Income Statements

Lesson	Location	PDF Pg	Revised	Correction
Earnings per Share	Example 10 – first sentence	71	26 August 2024	Replace: 1. Assume the same facts as Example 7 except that on 1 December 2018, a previously declared 2-for-1 stock split took effect. With: 1. Assume the same facts as Example 9 except that on 1 December 2018, a previously declared 2-for-1 stock split took effect.

Analyzing Statements of Cash Flows I

Lesson	Location	PDF Pg	Revised	Correction
Linkages between the Financial Statements	Exhibit 4	128	26 August 2024	Replace table header: Income Statement for year ended 31 December 20X1 Replace table header: Statement of Cash Flows for year ended 31 December 20X1 With: Income Statement for year ended 31 December 20X2 With: Statement of Cash Flows for year ended 31 December 20X2

Analyzing Statements of Cash Flows II

Lesson	Location	PDF Pg	Revised	Correction
Ratios and Common-Size Analysis	Paragraph under Exhibit 5	162-163	26 August 2024	<p>Replace: The common-size statement in Exhibit 5 has been developed based on Acme's cash flow statement using the indirect method for operating cash flows and using net revenue (cash received from customers) for the company in 2018 of USD23,598 from Exhibit 3.</p> <p>With: The common-size statement in Exhibit 5 has been developed based on Acme's cash flow statement using the indirect method for operating cash flows and using net revenue (cash received from customers) for the company in 2018 of USD23,543 from Exhibit 3.</p>

Analysis of Inventories

Lesson	Location	PDF Pg	Revised	Correction
Practice Problems	Question 34	208	26 August 2024	<p>Replace solution: B is correct.</p> <p>_____</p> <p>Explanatory text should read:</p> <p>With: C is correct.</p> <p>_____</p> <p>In a period of rising inventory costs, inventory valued using FIFO would have relatively higher values compared to inventory valued using LIFO. Thus, any mark downs of inventory values to NRV would have the least impact on inventories valued using the LIFO method as they are already conservatively valued.</p>

Analysis of Income Tax

Lesson	Location	PDF Pg	Revised	Correction
Deferred Tax Assets and Liabilities	First paragraph under Realizability of Deferred Tax Assets	288	26 August 2024	<p>Replace: Assume Pinto Construction (a hypothetical company) depreciates equipment on a straight-line basis of 10 percent per year. The tax authorities allow depreciation of 15 percent per year. At the end of the fiscal year, the carrying amount of the equipment for accounting purposes would be greater than the tax base of the equipment thus resulting in a temporary difference.</p> <p>With: Pinto Construction receives advance payments from customers that are immediately taxable but these payments are not recognized as accounting income until Pinto Construction fulfills its obligations in later reporting periods.</p>

Introduction to Financial Statement Modeling

Lesson	Location	PDF Pg	Revised	Correction
Modeling Inflation and Deflation	Example 8 – Solution to 3	489	26 August 2024	<p>Replace: The highest gross profit is projected by Analyst D.</p> <p>With: The highest gross profit is projected by Analyst C.</p>

Equity Investments

Company Analysis: Past and Present

Lesson	Location	PDF Pg	Revised	Correction		
Practice Problems	Paragraph intro text	242	26 August 2024	Replace the sentence before Practice Problem 1: On average, NewShips' commission, which it receives as a broker from the customer, was 6% of the freight rate. With: On average, NewShips' commission, which it receives as a broker from the customer, was 5% of the freight rate.		
Practice Problems	Question 4	242-243	26 August 2024	Question should be disregarded as there is not sufficient information about Net Profit to provide a complete answer.

Last 12 months' sales: \$7,688 Last 12 months' operating profit: \$3,594 Low end of guidance Next 12 months' sales: $156.360 \times \$62.50 = \$9,773$ Next 12 months' operating profit: $\$9,773 - (156.360 \times 17.34) - 1,565 = 5,496$ Degree of operating leverage: $(5,496/3,594 - 1)/(9,773/7,688 - 1) = 1.95$ High end of guidance Next 12 months' sales: $167.197 \times \$62.50 = \$10,450$ Next 12 months' operating profit: $\$10,450 - (167.197 \times 17.34) - 1,565 = 5,986$ Degree of operating leverage: $(5,986/3,594 - 1)/(10,450/7,688 - 1) = 1.85$
Replace: C is correct. Last 12 months' sales: \$7,688 Last 12 months' operating profit: \$1,244 Low end of guidance Next 12 months' sales: $156.360 \times \$62.50 = \$9,773$ Next 12 months' operating profit: $\$9,773 - (156.360 \times 17.34) - 1,565 = 5,496$ Degree of operating leverage: $(5,496/1,244 - 1)/(9,773/7,688 - 1) = 1.95$ High end of guidance Next 12 months' sales: $167.197 \times \$62.50 = \$10,450$ Next 12 months' operating profit: $\$10,450 - (167.197 \times 17.34) - 1,565 = 5,986$ Degree of operating leverage: $(5,986/1,244 - 1)/(10,450/7,688 - 1) = 1.85$	With: C is correct. Last 12 months' sales: \$7,688 Last 12 months' operating profit: \$3,594 Low end of guidance Next 12 months' sales: $156.360 \times \$62.50 = \$9,773$ Next 12 months' operating profit: $\$9,773 - (156.360 \times 17.34) - 1,565 = 5,496$ Degree of operating leverage: $(5,496/3,594 - 1)/(9,773/7,688 - 1) = 1.95$ High end of guidance Next 12 months' sales: $167.197 \times \$62.50 = \$10,450$ Next 12 months' operating profit: $\$10,450 - (167.197 \times 17.34) - 1,565 = 5,986$ Degree of operating leverage: $(5,986/3,594 - 1)/(10,450/7,688 - 1) = 1.85$					

Fixed Income

Yield and Yield Spread Measures for Fixed-Rate Bonds

Lesson	Location	PDF Pg	Revised	Correction
Introduction	Learning Module Self-Assessment – Question 3	157	29 August 2024	Replace: The G-spread for Bond B is $(0.01271 - 0.011) = 173\text{bps}$. With: The G-spread for Bond B is $(0.01213 - 0.011) = 11.3\text{bps}$.
Other Yield Measures, Conventions, and Accounting for Embedded Options	Question Set – Solution 4	171	26 August 2024	Replace the solution to question 4: $r = 0.0762 \times 2 = 0.1512$. The yield-to-first call for the bond is 15.12%. With: $r = 0.0762 \times 2 = \mathbf{0.1525}$. The yield-to-first call for the bond is 15.25% .
Yield Spread Measures for Fixed-Rate Bonds and Matrix Pricing	Example 9, Solution 1	177	26 August 2024	Replace the G-spread of: $R = 0.0018662 \times 2 = 0.00373$. $0.01271 - 0.00373 = 89\text{bps}$. With: $R = \mathbf{0.002618} \times 2 = \mathbf{0.005235}$. Therefore, the G-spread is $0.01271 - 0.005235 = 75\text{bps}$.

Yield and Yield Spread Measures for Floating-Rate Instruments

Lesson	Location	PDF Pg	Revised	Correction
Yield Measures for Money Market Instruments	Example 2	196	26 August 2024	Replace: $PV = 20,004,918 / (1 + 45/365 \times 0.0006)$. With: $PV = \mathbf{20,005,918} / (1 + 45/365 \times 0.0006)$.
Yield Measures for Money Market Instruments	Example 3	197-198	26 August 2024	Replace the first equation and preceding text: The price of the commercial paper is 98.560 per 100 of face value, calculated using Equation 2 and entering $FV = 100$, Days = 90, Year = 360, and $DR = 0.0012$. $PV = FV \times \left(1 - \frac{\text{Days}}{\text{Year}} \times DR\right)$ $PV = 100 \times \left(1 - \frac{90}{360} \times 0.0012\right)$ $PV = 99.970$ Next, use Equation 5 to solve for AOR for a 365-day year, where Year = 365, Days = 90, $FV = 100$, and $PV = 99.970$. $AOR = \frac{\text{Year}}{\text{Days}} \times \frac{FV - PV}{PV}$ $AOR = \frac{365}{90} \times \frac{100 - 99.970}{99.970}$ $AOR = 0.00122$ The 90-day commercial paper discount rate of 0.120% converts to an add-on rate for a 365-day year of 0.122%. With: The price of the commercial paper is 99.975 per 100 of face value, calculated using Equation 2 and entering $FV = 100$, Days = 90, Year = 360, and $DR = \mathbf{0.0010}$. $PV = FV \times \left(1 - \frac{\text{Days}}{\text{Year}} \times DR\right)$ $PV = 100 \times \left(1 - \frac{90}{360} \times 0.0010\right)$ $PV = \mathbf{99.975}$ Next, use Equation 5 to solve for AOR for a 365-day year, where Year = 365, Days = 90, $FV = 100$, and $PV = \mathbf{99.975}$. $AOR = \frac{\text{Year}}{\text{Days}} \times \frac{FV - PV}{PV}$ $AOR = \frac{365}{90} \times \frac{100 - \mathbf{99.975}}{\mathbf{99.975}}$ $AOR = 0.00122$ The 90-day commercial paper discount rate of 0.10% converts to an add-on rate for a 365-day year of 0.1014% .
Solutions	Solution to 1	205	26 August 2024	Delete the first sentence: The estimated discount margin is 195 bps. Replace the calculation: $\frac{(MRR + QM) \times FV}{m} = \frac{(-0.0055 + 0.016) \times 100}{4} = 0.275$ The estimated discount margin is 195 bps. With: $\frac{(MRR + QM) \times FV}{m} = \frac{(-\mathbf{0.055} + 0.016) \times 100}{4} = \mathbf{0.2625}$

Lesson	Location	PDF Pg	Revised	Correction
Practice Problems/Solutions	Question and Solution to 5	204, 205-206	26 August 2024	<p>Replace the answer C: 0.28%.</p> <p>Replace the solution: C is correct. The bond equivalent yield is closest to 0.28%. The present value of the banker's certificate of deposit is calculated as follows:</p> $PV = FV \times \left(1 - \frac{\text{Days}}{\text{Year}} \times DR\right).$ $PV = 100 \times \left(1 - \frac{90}{360} \times 0.0055\right).$ $PV = 99.865.$ <p>The bond equivalent yield (AOR using a 365-day year) is calculated to be approximately 0.28%:</p> $AOR = \frac{\text{Year}}{\text{Days}} \times \frac{FV - PV}{PV}.$ $AOR = \frac{365}{90} \times \frac{100 - 99.8625}{99.8625}.$ $AOR = 0.0028.$
				<p>With: 0.56%.</p> <p>With: C is correct. The bond equivalent yield is closest to 0.56%. The present value of the banker's certificate of deposit is calculated as follows:</p> $PV = FV \times \left(1 - \frac{\text{Days}}{\text{Year}} \times DR\right).$ $PV = 100 \times \left(1 - \frac{90}{360} \times 0.0055\right).$ $PV = 99.865.$ <p>The bond equivalent yield (AOR using a 365-day year) is calculated to be approximately 0.56%:</p> $AOR = \frac{\text{Year}}{\text{Days}} \times \frac{FV - PV}{PV}.$ $AOR = \frac{365}{90} \times \frac{100 - 99.8625}{99.8625}.$ $AOR = 0.0056.$

The Term Structure of Interest Rates: Spot, Par, and Forward Curves

Lesson	Location	PDF Pg	Revised	Correction
Maturity Structure of Interest Rates and Spot Rates	Example 1, question 2	215-216	26 August 2024	<p>Replace solution of: $PV = 100.01$</p> <p>With: $PV = 99.99$</p>

Practice Problems	Solution to 2	260	26 August 2024	Replace: A is correct. The future value of reinvested coupon interest is $= FV(0.054, 6, 6.4, 0, 0) = 46.245.$	With: A is correct. The future value of reinvested coupon interest is $= FV(\mathbf{0.074}, 6, 6.4, 0, 0) = 46.245.$

Yield-Based Bond Duration Measures and Properties

Lesson	Location	PDF Pg	Revised	Correction
Introduction	Learning Module Self Assessment, Solution to 3	265	26 August 2024	Replace: Two instances in calculation that says “308” with “380”: C is correct. The money duration is 380: $MoneyDur = 308$. $\Delta PV_{Full} \approx -308 \times 0.005$.
				With: C is correct. The money duration is 380: $MoneyDur = \mathbf{380}$. $\Delta PV_{Full} \approx \mathbf{-380} \times 0.005$.
Modified Duration	Example 1	269	26 August 2024	Replace row in first table: Maturity 15 Oct. 2035
				With: Maturity 15 Oct. 2030
				Replace row in third table: Settlement date 15 Oct. 2025 Maturity 15 Oct. 2035
				With: Settlement date 11 Dec. 2025 Maturity 15 Oct. 2030
Properties of Duration	Following first paragraph	284	26 August 2024	There is a missing bracket in the denominator of the second term, after subtracting 1. Replace: $MacDur = \left\{ \frac{1+r}{r} - \frac{1+r + [N \times (c-r)]}{c \times [(1+r)^N - 1 + r]} \right\} - \frac{t}{T}$
				With: $MacDur = \left\{ \frac{1+r}{r} - \frac{1+r + [N \times (c-r)]}{c \times [(1+r)^N - 1] + r} \right\} - \frac{t}{T}$
Properties of Duration	Question Set, solution to 1	287	26 August 2024	Replace last cell in “Second bond” column: 4% coupon, paid semiannually, and five years to maturity, priced to yield 4%
				With: 4% coupon, paid semiannually, and five years to maturity, priced to yield 8%

Yield-Based Bond Convexity and Portfolio Properties

Lesson	Location	PDF Pg	Revised	Correction
Bond Risk and Return Using Duration and Convexity	Question Set	306-307	26 August 2024	<p>Replace Question Set introductory text: An investor purchases a €10 million semi-annual 3.75% coupon bond with a yield-to-maturity of 2.95%, settling 30 June 2025 and maturing 30 June 2032.</p> <hr/> <p>Replace Solution to 4: $PV^{Full} = \text{PRICE}(\text{DATE}(2025,6,30), \text{DATE}(2032,6,30), 0.0295, 0.0345, 100, 2, 0)$ = 103.198. The actual increase in the bond price is 3.1984%: $\Delta PV^{Full} = 3.1984\% \times \\$10,000,000 = \text{EUR}319,840$. The difference between the actual and the estimated price change is EUR73 (= 319,840 – 319,767).</p>
				<p>With: An investor purchases a €10 million semi-annual 2.95% coupon bond with a yield-to-maturity of 2.95%, settling 30 June 2025 and maturing 30 June 2032.</p> <hr/> <p>With: $PV^{Full} = \text{PRICE}(\text{DATE}(2025,6,30), \text{DATE}(2032,6,30), \mathbf{0.0246}, 0.0345, 100, 2, 0)$ = 103.1333. The actual increase in the bond price is 3.1333%: $\Delta PV^{Full} = \mathbf{3.1333\%} \times \\$10,000,000 = \text{EUR}313,330$. The difference between the actual and the estimated price change is EUR6,437 (= 313,330 – 319,767).</p>
Practice Problems	Question 2	312	26 August 2024	<p>Replace text in question: A bond pays a semiannual fixed coupon of 4.75%.</p>
				<p>With: A bond pays a semiannual fixed coupon of 4.70%.</p>
Practice Problems	Solution to 8	315	26 August 2024	<p>Replace last sentence of solution text: All else equal, the portfolio should outperform the lower-duration benchmark portfolio in both rising and falling interest rate environments.</p>
				<p>With: All else equal, the portfolio should outperform the lower-convexity benchmark portfolio in both rising and falling interest rate environments.</p>

Curve-Based and Empirical Fixed-Income Risk Measures

Lesson	Location	PDF Pg	Revised	Correction
Curve-Based Interest Rate Risk Measures	Example 1	324	26 August 2024	Replace: $EffDur = \frac{(PV_-) - (PV_+)}{2 \times (\Delta Curve) \times (PV_0)}$ $EffDur = \frac{(102.891) - (99.050)}{2 \times (0.00025) \times (101.060)}$ $EffDur = 7.601.$ $EffCon = \frac{[(PV_-) + (PV_+) - 2 \times (PV_0)]}{(\Delta Curve)^2 \times (PV_0)}$ $EffCon = \frac{[(102.891) + (99.050)] - [2 \times (101.060)]}{(0.00025)^2 \times (101.060)}$ $EffCon = -283.$
				With: $EffDur = \frac{(PV_-) - (PV_+)}{2 \times (\Delta Curve) \times (PV_0)}$ $EffDur = \frac{(102.891) - (99.050)}{2 \times (0.0025) \times (101.060)}$ $EffDur = 7.601.$ $EffCon = \frac{[(PV_-) + (PV_+) - 2 \times (PV_0)]}{(\Delta Curve)^2 \times (PV_0)}$ $EffCon = \frac{[(102.891) + (99.050)] - [2 \times (101.060)]}{(0.0025)^2 \times (101.060)}$ $EffCon = -283.$
Curve-Based Interest Rate Risk Measures	Question Set – Solution 2	325	26 August 2024	Replace: $EffDur = \frac{(PV_-) - (PV_+)}{2 \times (\Delta Curve) \times (PV_0)}$ $EffDur = \frac{(103.891) - (100.004)}{2 \times (0.00025) \times (102.208)}$ $EffDur = 76.061.$
				With: $EffDur = \frac{(PV_-) - (PV_+)}{2 \times (\Delta Curve) \times (PV_0)}$ $EffDur = \frac{(103.891) - (100.004)}{2 \times (0.0025) \times (102.208)}$ $EffDur = 7.6061.$

Lesson	Location	PDF Pg	Revised	Correction
Curve-Based Interest Rate Risk Measures	Question Set – Solution 4	326	26 August 2024	<p>Replace:</p> <p>Solution:</p> $EffCon = \frac{[(PV_-) + (PV_+)] - [2 \times (PV_0)]}{(\Delta Curve)^2 \times (PV_0)}$ $EffCon = \frac{[(103.891) + (98.504)] - [2 \times (102.208)]}{(0.00025)^2 \times (102.208)}$ $EffCon = -3,164.$
				<p>With:</p> <p>Solution:</p> $EffCon = \frac{[(PV_-) + (PV_+)] - [2 \times (PV_0)]}{(\Delta Curve)^2 \times (PV_0)}$ $EffCon = \frac{[(103.891) + (98.504)] - [2 \times (102.208)]}{(0.0025)^2 \times (102.208)}$ $EffCon = -3,164.$
Key Rate Duration as a Measure of Yield Curve Risk	Exhibit 5	331	26 August 2024	<p>Replace:</p> <p>Assume the portfolio is weighted by the prices of the respective 2-, 5-, and 10-year bonds for a total portfolio value of \$293 million, or \$1 million \times (99.50 + 98.31 + 95.43). The portfolio's modified duration is calculated as</p> $5.345 = [1.991 \times (99.5/293.2)] + [4.869 \times (98.3/293.2)] + [9.333 \times (95.4/293.2)].$ <p>Alternatively, we could calculate each key rate duration by maturity. For example, the two-year key rate duration (KeyRateDur2) is</p> $0.676 = 1.991 \times (99.5/293.2).$ <p>Note that the three key rate duration values sum to the portfolio duration value of 5.345.</p>
				<p>With:</p> <p>Assume the portfolio is weighted by the prices of the respective 2-, 5-, and 10-year bonds for a total portfolio value of \$277 million, or \$1 million \times (99.006 + 93.96 + 81.01). The portfolio's modified duration is calculated as</p> $5.368 = [1.990 \times (99.006/277)] + [4.938 \times 93.96/277] + [9.828 \times (84.01/277)]$ <p>Alternatively, we could calculate each key rate duration by maturity. For example, the two-year key rate duration (KeyRateDur2) is</p> $0.711 = 1.990 \times (99.006/277).$ <p>Note that the three key rate duration values sum to the portfolio duration value of 5.368.</p>

Credit Risk

Costs and Benefits Associated with Owning the Underlying	Example diagram	92	26 August 2024	<p>Replace the formula:</p> $F_{0,(f/d)}(T) = 1.3325 = \frac{\text{AUD1,333.80}}{\text{AUD1,001}}$ <p>With:</p> $F_{0,(f/d)}(T) = 1.3325 = \frac{\text{AUD1,333.83}}{\text{USD1,001}}$
Costs and Benefits Associated with Owning the Underlying	Question Set, Question 2	93	26 August 2024	<p>Replace: B. A foreign currency forward where the domestic risk-free rate is greater than the foreign risk-free rate</p> <p>With: B. A foreign currency forward where the foreign risk-free rate is greater than the domestic risk-free rate</p>

Lesson	Location	PDF Pg	Revised	Correction
Costs and Benefits Associated with Owning the Underlying	Question Set, Question #2	93	26 August 2024	Replace: B is correct. The FX forward rate is greater than the spot rate if the domestic risk-free rate is greater than the foreign risk-free rate.

With:
 B is correct. The FX forward rate is greater than the spot rate if the **foreign** risk-free rate is greater than the **domestic** risk-free rate.

Pricing and Valuation of Futures Contracts

Lesson	Location	PDF Pg	Revised	Correction
Pricing and Valuation of Interest Rate Forward Contracts	Solution 5	113	26 August 2024	Replace all references to “gain” in the answer with “loss”

An immediate appreciation in the ZAR/EUR spot price after contract inception will result in an MTM **loss** from Rook Point’s perspective as the forward seller of ZAR/EUR.

The FX forward MTM from Rook Point’s perspective equals the present value of the forward price discounted at the interest rate differential between the foreign currency and the domestic currency minus the spot price:

$$V_0(T) = F_{0,f/d}(T) e^{-(r_f - r_d)T} - S_{0,f/d}$$

Note that ZAR is the price, or foreign, currency and EUR is the base, or domestic, currency, so we can rewrite the equation as:

$$V_0(T) = F_{0,ZAR/EUR}(T) e^{-(r_{ZAR} - r_{EUR})T} - S_{0,ZAR/EUR}$$

If the ZAR price ($S_{0,ZAR/EUR}$) appreciates from 16.909 to 16.5, we can show that Rook Point would have a 0.4090 **loss**, as follows:

$$\begin{aligned}
 V_t(T) &= 17.2506e^{-(0.035 - -0.005) \times (0.5)} - 16.5 \\
 &= 16.909 - 16.5 \\
 &= 0.4090
 \end{aligned}$$
